

AFTER THE CRASH — FIVE QUESTIONS

Disarm. Breathe. Retrieve. Inspect. Then ask:

1. What did I intend to do?
2. What did the quad actually do?
3. What did I see in the goggles a half-second before the crash?
4. What would I change about my stick input?
5. What would I change about my setup?

Output: One specific change. Then fly again.

WHERE PROGRESS COMES FROM

CONTROL

Smooth, small stick inputs

AWARENESS

Battery, link, space, obstacles

RECOVERY

Disarm, debrief, fly again

Stick control alone plateaus. Beginners who balance all three keep getting better.
